DETAILED ACTION

Response to Request for Reconsideration

1. Receipt of the request for reconsideration filed 12/13/2004 is acknowledged.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 3,957,418 to Sata ("Sata").

Sata discloses in Figures 1-2 the invention as described in applicant's claim 1. In particular, Sata discloses an fuel saving apparatus capable of raising combustion temperature by providing means for reducing air pressure (18) in a combustion equipment of an internal combustion engine (see Abstract and col. 9, line 22 through col. 10, line 19).

Response to Arguments

4. Applicant's arguments filed 12/13/2004 have been fully considered but they are not persuasive. Applicant argues that Sata does not provide means for reducing air pressure in combustion equipment of an internal combustion engine as defined in applicant's claim 1. However, the examiner notes that Sata discloses a closed system that includes a combustion

Art Unit: 3749

chamber (2) and a cleaning tank (9) that are combustion equipment of an internal combustion engine (see last three lines of abstract). Pressure relief valve (18) functions to regulate pressure in the closed system and remove combustion products in the system, which impede combustion (see Sata, col. 3, lines 6-12). Further, the apparatus expressly functions to reduce fuel consumption (see Sata, col. 6, lines 40-43).

Applicant also argues that the valve of Sata does not operate to raise combustion temperature. However, the valve of Sata operates for the same purpose and in the same manner as applicant's means for reducing air pressure in that the valve improves combustion efficiency by reducing system pressure and removing undesirable combustion products from the system. Further, in performing these functions, the valve allows continuous combustion to occur (see Sata, col. 8, lines 4-12). This valve is therefore capable of raising combustion temperature as recited in applicant's claim. Accordingly, applicant's claim is not considered to patentably define over the prior art.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 3749

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
